OUTCHE NEXT GENERATION IN FLOOD PROTECTION

FLOOD BARRIERS

Activates when wet!

Starts as: 9in wide & either 5ft, 10ft or 17ft long

ONCE ACTIVATED, USAGE OPTIONS:

Shrinks while evaporating, lasts 6-12 months

Allow complete evaporation & reuse

Could take 2 + months depending on humidity

• Be sure to keep dry in well ventilated area

• As Quick Dams degrade, a "sliminess" will be present

Grows to: 3.5in high & 34lbs, 68lbs & 116lbs

EACH FLOOD BARRIER:

Leave in position & reuse

Eventually contents degrade

Grows when re-exposed to water

PREPA

PROTE

INSTRUCTIONS:

- Place Quick Dams in the path of problem water
- Smaller stitched area acts as a wedge & prevents the barrier from rolling out of position
- Quick Dams are activated when exposed to fresh water and will absorb & swell to create a barrier
- During first activation, you will see white gelled particles in the stitching areas- this is normal & naturally decomposes
- If a rush of water is expected, pre-soaking the Quick Dams and stacking them is recommended
- Stack Barriers by flipping one over so small stitched areas are opposite each other, which creates a flat surface to secure the third layer in place Quick Dams may be left in position for long term flood protection, up to several months
- Quick Dams are resuable they grow when exposed to water and will shrink as water evaporates
- Quick Dams may not be a solution for all situations
- * Not for use with salt water flooding

PROPER FLOOD BARRIER STACKING:

Pyramid: Overlapped and Stairstepped For proper stability, width should be 3 times height

and stanstepped

Once dry "crunchy" - store away for later use
Speed decomposition for disposal

respectively

- Leave in direct sunlight for months
- Cut open & expose contents to direct sunlight
- Soak in salt water
- Simply throw in trash

Quick Dams are safe, non-toxic & environmentally friendly.
