

# Sleeve-TITE™ Sleeve Anchors

## Description

The Sleeve-TITE™ sleeve anchor is a high-strength pre-assembled expansion anchor designed for anchoring into concrete, masonry, and brick. The Sleeve-TITE anchor has a **6-dimple expansion sleeve** over a threaded stud bolt which provides superior performance in all conditions. These anchors are available in a number of head styles for a wide array of applications.

## Key Features & Benefits

- ▶ Pre-assembled with nut and washer for immediate installation
  - Eliminates the problem of missing components
- ▶ Anchor size = Drill bit size
- ▶ Can be used for solid and hollow concrete and masonry applications
- ▶ New **6-dimple expansion sleeve** allows the anchor to grip imperfections in the base material
- ▶ One-piece sleeve design allows stress to be distributed over the entire contact area
- ▶ Available in a variety of lengths and diameters
- ▶ Available in a variety of head styles:
  - Acorn Nut
  - Hex Bolt
  - Hex Nut
  - Phillips Flat Head
  - Rod Coupling
  - Tie Wire
- ▶ Available in zinc-plated carbon steel and Type 304 stainless steel

## Applications

- ▶ Shelving
- ▶ Cable Trays
- ▶ Sill Plates
- ▶ Door Frames
- ▶ Window Frames
- ▶ Railing

## Available Nut and Head Styles

## Specifications, Listings and Approvals

**Diameters:** 1/4" – 3/4"

### Carbon Steel Anchor Materials:

#### Body:

1/4 through 5/16: C1035  
3/8 through 3/4: C1010/ C1018

#### Expansion Sleeve:

All sizes: C1010/C1018

#### Washer:

All sizes: C1010/C1018

#### Finish: Zinc plating

Meets ASTM B633, SC1 Type III with clear chromate, SC1 class mild

### Stainless Steel Anchor Material:

#### All components:

AISI Type 304

### Federal Specifications:

- QQZ-325C, Type II, Class 3 (clear chromate added)
- GSA FFS-325, Group II, Type 3, Class 3

## Installation Information

### Instructions

1. Drill the hole perpendicular to the work surface. To assure full holding power, do not ream the hole or allow the drill to wobble.

Drill the hole at least 1 anchor diameter deeper than the calculated embedment depth, but not closer than two anchor diameters to the bottom surface of the concrete. Through drilling is allowed when using sleeve anchors in hollow concrete block.

2. Clean the hole using compressed air and a nylon brush. A clean hole is necessary for proper performance.
3. Drive anchor through the fixture into the hole making sure the nut, or head, rests solidly against the fixture. Be sure the anchor is set to the required embedment depth.
4. Tighten the nut, or head, 3 to 5 turns past the hand-tight position.

**NOTE: Always wear safety glasses.** Follow drill manufacturer's instructions. Use only solid carbide-tipped drill bits meeting ANSI B212.15 diameter standards.
