

ASSEMBLY INSTRUCTION

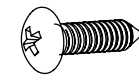

Caution:

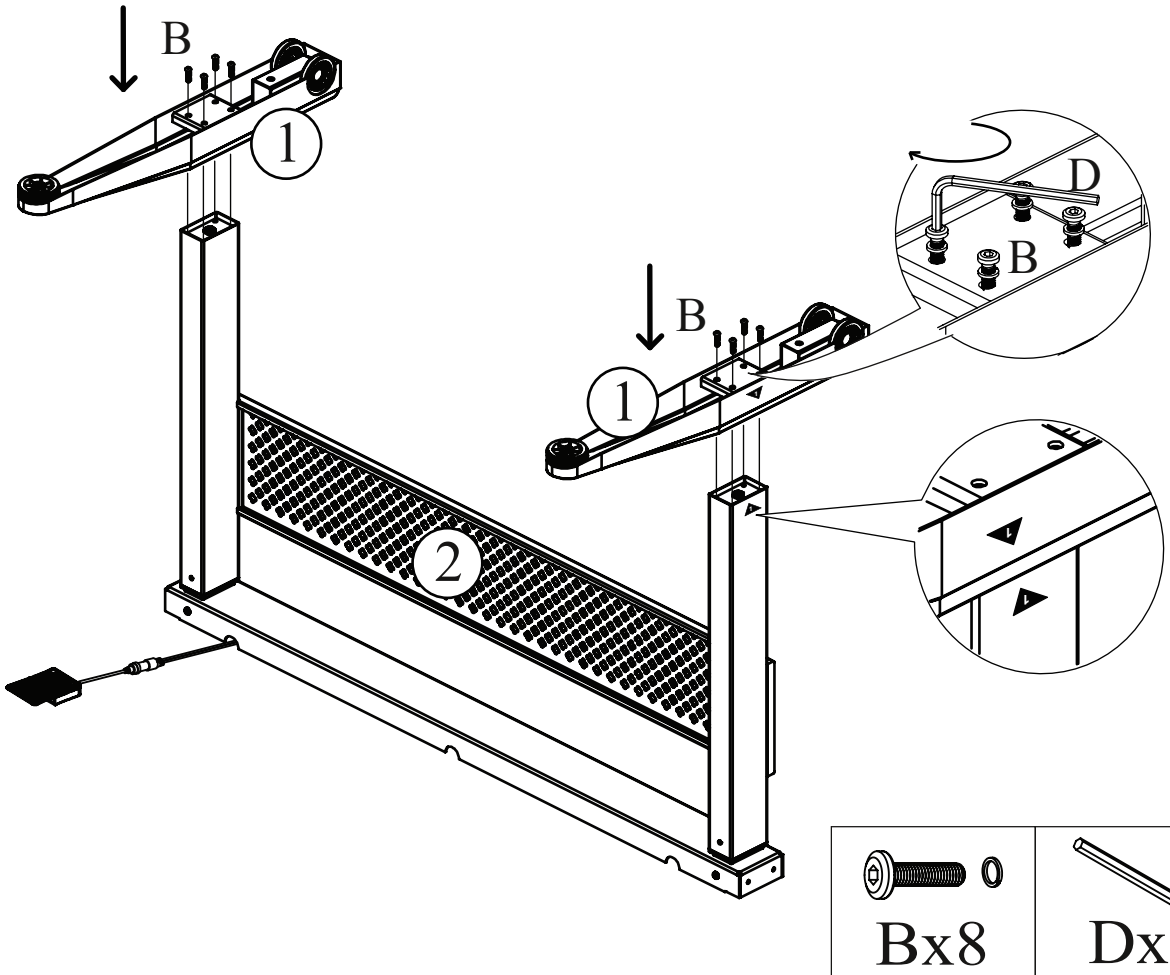

1. The maximum static loading weight on the desk is 220lbs. However, the ideal loading weight is 11-18lbs., which allows the desk to easily move up and down.
2. As with most gas lifts, you may need to apply some upwards force to release the pressure with the initial use in cold temperatures.
3. Do not sit on desk and distribute weight evenly on top to prevent tipping.

Please supervise children to prevent them from climbing on the desk!
