

Congratulations on purchasing your new Hunter® ceiling fan! It will provide comfort and performance in your home or office for many years. This installation and operation manual contains complete instructions for installing and operating your fan.

We are proud of our work and appreciate the opportunity to supply you with the best ceiling fan available anywhere in the world.

**To register your fan, please visit:**

☒ Must be able to secure the fan to building structure or fan-rated outlet box

If you are unfamiliar with wiring, use a qualified electrician.

☒ Know your wiring

☒ Assess location

You may need a friend to help you.

☒ Check box to see fan weight

Ceiling angles greater than 34° will require an Angled Mounting Kit. See page 4 for details.

☒ Assess ceiling angle

## Read and Save These Instructions

This product conforms to UL Standard 507.

### ⚠ WARNINGS

w.1 - To reduce the risk of fire, electrical shock, or personal injury, mount fan directly from building structure and/or an outlet box marked acceptable for fan support of 70 lbs (31.8 kg) and use the mounting screws provided with the outlet box.

w.2 - To avoid possible electrical shock, before installing or servicing your fan, disconnect the power by turning off the circuit breakers to the outlet box and associated wall switch location. If you cannot lock the circuit breakers in the off position, securely fasten a prominent warning device, such as a tag, to the service panel.

w.3 - To reduce the risk of fire, electrical shock, or motor damage, use only Hunter Solid State Speed Controls.

w.4 - To reduce the risk of personal injury, do not bend the blade brackets when installing the blade brackets, balancing the blades, or cleaning the fan. Do not insert foreign objects in between rotating fan blades.

### ⚠ CAUTIONS

c.1 - All wiring must be in accordance with national and local electrical codes ANSI/NFPA 70. If you are unfamiliar with wiring, use a qualified electrician.

c.2 - Use only Hunter replacement parts.

If mounting to a support structure, you will also need these tools.

34°

CEILING ▲

**If you have a flat ceiling:**

Hang your fan by the standard downrod (included).

**OPTION 1****If you have an angled ceiling:**

1. If your ceiling angle is less than 34°, hang your fan by the standard downrod (included).
2. If your ceiling angle is greater than 34°, you will also need an Angled Mounting Kit (sold separately).

**OPTION 2**

Use the three steps below to determine if your ceiling angle is greater than 34°

**Mounting Options**

www.HunterFan.com

1.866.268.1936

Use **Standard Mounting** to hang the fan from a flat ceiling.Use **Angled Mounting** to hang the fan from a vaulted or angled ceiling.

Make sure all four bumpers are still attached.

For angled ceilings, point opening toward peak.

If you are unable to do this, call Technical Support at 1-888-830-1326.

**Use wood screws** (included) when securing to support structure with approved electrical outlet box. Drill 9/64" pilot holes in support structure to aid in securing ceiling bracket with hardware found in the ★ hardware bag.

**Use machine screws** (provided with outlet box) when securing to existing ceiling fan-rated outlet box. Make sure it is securely installed and is acceptable for fan support of 31.8 kg (70 lbs) or less.

Refer to warning w.1 on pg. 2

To avoid possible electrical shock, before installing your fan, disconnect the power by turning off the circuit breakers to the outlet box associated with the wall switch location.

Option 1

Standard  
Downrod

Included  
(pre-assembled)

Option 2

Longer  
Downrod

Sold Separately

If you need a different downrod length follow these steps:

skip to next page

**Tip:** If you have difficulty feeding the wires through the downrod, try taping the wires to a thin dowel rod, then drop the dowel rod and wires through the downrod. Be sure to remove all tape once the wires are fed through to the other side.

Remove the pre-installed setscrew so that the downrod can be inserted.

Hand tighten the downrod (at least 4-5 full turns) until it stops.

The wires can be cut, but leave at least 8" extending from the top of the downrod.

Tighten the setscrew with pliers. **DO NOT HAND TIGHTEN.**

If the setscrew is not tightened securely, the fan may fall.

Put the wires and downrod through the canopy. Let the canopy sit loosely on top of the fan.

**DO NOT PICK THE FAN UP BY THE CANOPY OR WIRES.** Place the downrod ball into the slot in the ceiling bracket.

**Note:** To connect the wires, hold the bare metal leads together and place a wire connector over them, then twist clockwise until tight.

Using an orange wire connector from the ★ hardware bag, connect the 3 grounding wires (green, green/yellow stripe, or bare copper) coming from the ceiling, downrod, and hanging bracket.

Using the orange wire connectors from the ★ hardware bag, connect the black wire (ungrounded) from the ceiling to the black wire from the fan. Connect the white wire (grounded) from the ceiling to the white wire from the fan.

Turn the splices upward and push them carefully back through the hanger bracket into the outlet box. Spread the wires apart, with the grounded wires on one side of the outlet box and the ungrounded wires on the other side of the outlet box.

Refer to CAUTION c.1 on pg. 2

Position the canopy so that, when lifted into place, the canopy fits into the hanging bracket as shown.

Lift the canopy into place so that the screw holes are aligned.

✗ Insert the two canopy screws found in the ● hardware bag.

**Note:** Fan style may vary.

Screw the finial onto the threaded rod found at the bottom of the motor assembly.

Lift a blade ring to the motor assembly and align the screw holes.

Install three blade assembly screws, found in the X hardware bag.

**Note:** In order to provide proper blade support, choose the three small screw holes that are aligned with the three arms of the blade ring as shown in the illustration.

**If you wish to install your fan with three blades,** skip to the next page.

**If you wish to install your fan with six blades,** lift the optional second blade ring to the motor assembly and install three blade assembly screws (found in the X hardware bag) as shown in the illustration.

Attach each blade to the blade ring using three blade assembly screws, found in the ▲ hardware bag.

Your blades are shielded with Dust Armor® which is a nanotechnology coating that repels dust. For cleaning the fan, use soft brushes or cloths to prevent scratching. Cleaning agents may damage the finishes.

Shut off power to the room you will be working in at the breaker box. After removing the switch plate cover, remove all wiring from the switch.

Using the wire connectors, connect each black wire from the wall control to a black wire from the switch box.

**Note:** If two white wires are present in the switch box, connect them to each other if they are not already connected.

Insert the wall control into the outlet box and secure the two metal tabs to the tabs on the switch box using the two flat head screws that came with the switch box.

Do not restore power until all work is complete.

⊗ Remove the knob from the wall control and mount the faceplate (not included) to the wall control using the two #6-32 screws you removed earlier from the faceplate.

Reattach the knob onto the wall control and turn it to the left for the OFF position.

The knob on the wall control unit controls power to the fan. The fan has four speed settings in sequence: high, medium, low and off.

To change the direction of air flow, move the reverse switch to the opposite position.

For cleaning the fan, use soft brushes or cloths to prevent scratching. Cleaning products may damage the finishes.

## Fan doesn't work

- Make sure power switch is on.
- Push the motor reversing switch firmly left or right to ensure that it is engaged.
- Check the circuit breaker to ensure the power is turned on.
- Make sure the blades spin freely.
- Turn off power from the circuit breaker, then loosen the canopy and check all the connections according to the wiring diagram on page 9.
- Turn off power from the circuit breaker, then ensure the wall control is properly installed according to the instructions on pages 14-15.

## Excessive wobbling

- Tighten all of the blade and blade ring screws until they are snug.
- Turn the power off, support the fan carefully, and check that the hanger ball is properly seated.

## Noisy Operation

- Tighten the blade and blade ring screws until they are snug.
- Check to see if any of the blades are cracked. If so, replace all of the blades.

Hunter fans have the power to cut your cooling costs up to 40%.

### Beat the High Cost of Cooling

The air movement created by a Hunter ceiling fan lets you set your thermostat higher and still stay comfortable. Every degree you raise the thermostat saves up to 7% on energy costs. So, you can cut back on expensive air conditioning ... and save up to 40%\* on cooling. In winter, your Hunter fan recirculates warm air and saves up to 10%\* on heating bills.

\* On average at low speed settings. Your savings may vary based on climate, building type and thermostat setting.

### Save Energy and Money While Protecting the Environment

Congratulations! You're saving energy and money while protecting the environment by purchasing this ENERGY STAR qualified Hunter ceiling fan! With this purchase, you are doing your part to protect the environment. Your new ceiling fan has earned the ENERGY STAR label because it meets high energy efficiency specifications set by the Environmental Protection Agency (EPA). ENERGY STAR labeled ceiling fans save energy because they have more efficient fan motors and air delivery due to more aerodynamic blade configurations. Ceiling fan models bearing the ENERGY STAR label move air 14 - 20% more efficiently than typical ceiling fan models. For more information on ENERGY STAR visit [www.energystar.gov](http://www.energystar.gov).
