

Highest Safety Standards

The Safe2Vent™ drum vent filter is compliant in all 50 states and conforms to OSHA, EPA and California regulations.

Our exclusive bouncing Viz-a-Ball™ tells the operator when the can is completely depressurized and safe to remove.

The Safe2Vent™ has the highest flow rate available, minimizing the potential for dangerous over pressurization of the drum during operation.

Our coalescing element traps liquids before they reach the carbon media, extending filter life.

Plus, Safe2Vent™ activated carbon filter adsorbs more VOC's and harmful vapors.

The Safe2Vent™ filter's cellulose cartridge is 96% biodegradable, can safely be sent directly to the landfill and decomposes quickly. Other drum vent filters that are plastic encased can take years to break down.

Product Overview

The Safe2Vent™ drum vent filter is compatible with all manual, single aerosol can disposal systems. The new revolutionary design includes the only indicator check valve available. The Viz-a-Ball™ keeps the operator safe by indicating when the system is completely depressurized and is safe to open. Plus, Viz-a-Ball™ acts as a check valve to seal the drum when not processing cans.

Saves you Money

With additional carbon media, replaceable cartridges, and a lower price than competitors, the Safe2Vent™ is more cost effective than any other drum vent filter. They are:

1. Fully replaceable. Just remove the filter cartridge from the reusable base and replace with the new cartridge.
2. Longer lasting. Has more filter media than any other filter available.
3. More effective. The integral coalescing element traps liquids before they reach the carbon to prevent clogging and extend filter life.

Specifications

Item Name	Safe2Vent™ Drum Vent Filter
Application	Filter for aerosol can disposal and recycling systems
Type	Single Unit Dual unit
Compliance	Compliant in all 50 states and conforms to OSHA, EPA and California regulations
Composition	Filter Housing: Cellulose
Dimensions	Single unit: 10" H x 4" W x 13" L Dual unit: 13" H x 4" W x 9" L
Filter Life	Single unit: Every 600 cans or 90 days Dual unit: Every 1200 cans or 90 days
Shipping weight	3-8 lbs
Includes	Safe2Vent™ Drum Vent Filter, reusable filter base

Reduce the cost of Hazardous waste

With the Safe2Vent™ Drum Vent Filter

Product Features

Universal Design: The Safe2Vent™ drum vent filter is compatible with all manual, single can aerosol can disposal systems. The reusable base is made to fit the 3/4 inch opening on any steel drum. Our dual Safe2Vent™ filters are designed for units processing high volumes of aerosol cans or multi-can disposal systems such as the AeroVent 3X®.

Exclusive Viz-a-Ball™ Indicator Check Valve: This revolutionary design serves two essential functions. First, it keeps the operator safe by indicating when the system is completely depressurized and can be opened. Second, the ball check valve complies with OSHA, EPA and California regulations requiring the drum to be closed and prevent vapors from escaping into the atmosphere after processing. The Safe2Vent™ is the only drum vent filter that includes this important safety feature.

Environmentally Friendly: Safe2Vent™ cellulose construction is 96% biodegradable, may be safely sent directly to the landfill and decomposes naturally. Other drum vent filters that are plastic encased can take years to breakdown. Safe2Vent™ contains more carbon media than any other filter available and will last longer. Plus, each replaceable filter includes the coalescing element for convenient and safe handling.

Compliant in all 50 states: Unlike many drum filters, the Safe2Vent™ is compliant in all 50 states and conforms to OSHA, EPA and California SB1158 regulations.
