SAFE RELIABLE ACCESS

Finding the Right Size Gate
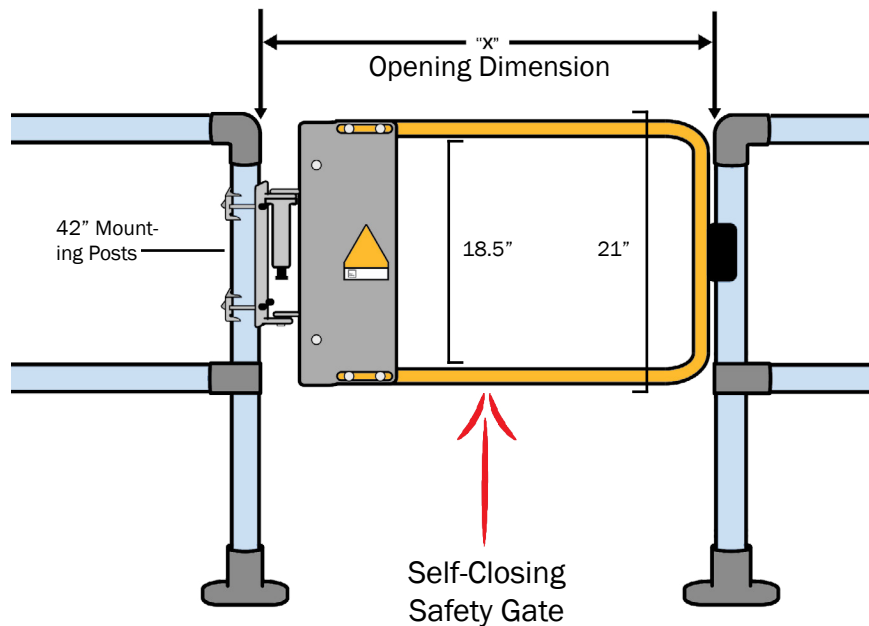

1. Measure the opening dimension

- The opening dimension is from the inside of the railing to the inside of the opposite railing.

2. Based on your measurement, find the corresponding gate from the table below

- The first column indicates the smallest opening dimension that the gate can accommodate while the second column indicates the largest. Find the range between which your opening dimension measurement lands.

3. Powder Coat or Galvanized?

- All gate sizes are available in a powder coat safety yellow or galvanized finish.
