

LINIER™ VERTICAL RAIL KITS

The LINIER™ Vertical Rail Kits compliment the LINIER Fixed and Swing Out Wall Mount Cabinets, as well as the LINIER Full Size Server Cabinets. Available in both a 10-32 tapped option as well as cage nut style, to suit the installers particular preference. Whether you need to add additional mounting capabilities, or you want to replace the included cage nut rails with a tapped version, these Vertical Rail Kits will give you the mounting functionality you need.

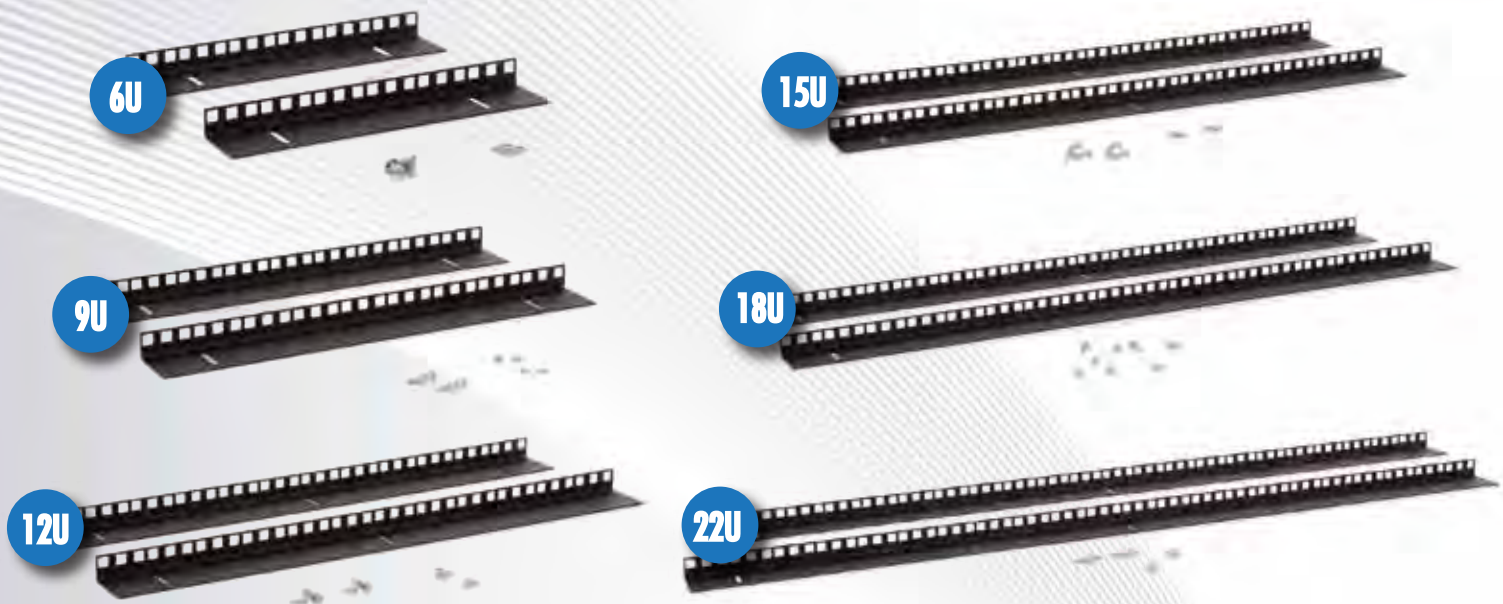

FEATURES

Cage Nut Style Rails - This set of universal cage nut rails are to be used in conjunction with rack screws and cage nuts. Cage nut style rails continue to grow in popularity because installers don't have to worry about stripping holes. If a cage nut is stripped, you simply remove it and install a new one. With tapped rails, replacement of the entire rail is required.

10-32 Tapped Rails - Many installers enjoy the convenience of pre-tapped mounting rails. A tapped mounting rail features holes that contain internal threads. These threaded holes accept rack screws without the need for additional hardware such as cage nuts. This mounting style requires less hardware, and less installation time.

- Fully adjustable
- Includes two rails
- Installation hardware included
- Made in the USA
- 5-year limited warranty
